TurboStar®

Directional Mixer

The TurboStar® directional mixer is used in municipal and industrial wastewater applications to introduce directional linear mixing into lagoons, equalization basins, sludge holding and/or activated sludge systems. The unit provides thorough circulation and mixing of basin contents. It is excellent for shallow depths and channels. TurboStar is an ideal solution for upgrading, retrofitting, supplementing, or replacing under-performing mixer technologies.

Features

- No submerged seals or bearings to maintain
- Engineered three-bladed 316Ti ss spiral self-cleaning propeller for maximum efficiency and consistent high performance
- Durable pontoons with 304 ss framework
- Easy installation
- Available in 3 - 30 HP (2.2 - 22 kW)
- Float and bridge mounting options for flexible installation in any basin

Benefits

- Negligible noise level
- Nearly universal installation into any basin
- Can be installed without dewatering or taking a basin offline
- Minimal maintenance
- No underwater parts to maintain

How it Works

The TurboStar mixes and circulates by rotating a three-blade helical propeller. Ideal for anywhere directional mixing is needed. Only 3 moving parts to make for easier maintenance.
