## **Plant Wellness Evaluations**

- Keeps the plant operating at maximum efficiency
- An Aqua-Aerobic Service Technician visits the plant and performs a detailed mechanical and process inspection
- The plant receives a comprehensive report and custom recommendation to restore the Aqua-Aerobic system to peak operating efficiency. The report includes recommended changes to operation practices, parts inventory lists, and suggested maintenance schedule

## **AquaABF® Filter Efficiency Program**

- Restores filter back to optimum performance
- Aqua-Aerobic technician will perform a physical inspection of the filter components (also available for selected non-AquaABF installations)
- Components inspected include underdrain, media, porous plates, bridge mechanisms, drive shaft, bearings, backwash shoe and wear strips, controls, drive motor, and gearbox
- A written report is provided with recommendations and price list of parts to restore the filter to peak performance
