

AQUA-AEROBIC SYSTEMS, INC.  
A Metawater Company

## Good As New™ Rebuild Your Aerator or Mixer Power Section

Aqua-Aerobic Systems will reuse the diffusion head or motor base of your aerator or mixer to rebuild the power section and return to you in "Good As New" condition. The rebuilt power section will include a new motor, shaft parts, and prop. This will give your equipment the efficiency and performance of a new power section at a cost savings of 25% - 35% when compared to a new purchase.

### How the Program Works

Simply contact your Aqua-Aerobic Aftermarket Service Representative and arrange to have your existing diffusion head or motor base shipped to us. We will issue you a return authorization number for shipping from your site to ours while covering the cost of freight. You can send your complete power section for Aqua-Aerobic to disassemble.

Customer-Supplied Diffusion Head

Alternatively, you can send us just your diffusion head and/or motor base, and your existing prop and motor will be yours to keep.

After receiving your diffusion head or motor base, Aqua-Aerobic will rebuild the power section (not including the float) with a new Endura® Series high-efficiency motor. We will also include a new precision propeller, shaft parts, and perform a vibration balance check to ensure "Good As New" quality.

Prop Damage: One of the Leading Causes of Motor Failure, and a Reason to Purchase "Good As New" Power Section

### Features and Advantages

- 3-year mechanical warranty on new motor
- No maintenance on motor for the first three years
- Proven long-term field performance
- Vibration-tested and hydraulically designed for optimum performance in stringent applications

- New props reduce vibration and extend motor life
- Options such as thermostats, heavy-duty epoxy painting, or explosion-proof motors are available
- Operates under the most severe conditions
