

---

## **Biological System Efficiency Program**

- Aqua-Aerobic technician will perform a physical inspection of the AquaSBR components and / or a process evaluation
- Mechanical inspection components may include decanter, diffusers, instrumentation and control system
- Process evaluation may include aeration times, phase times, effluent quality, mixed liquor concentration / sludge wasting levels
- Written report is provided with recommendations and price list of parts to restore SBR to peak performance

## **Cloth Media Filter Efficiency Program**

- Restores filter back to optimum performance
- Aqua-Aerobic technician will perform a physical inspection of the cloth media filter components and overall process
- Components inspected include filter media, drive/bridge system (as appropriate), backwash system , pumps, valves, and controls
- Written report is provided with recommendations and price list of parts to restore filter to peak performance

## **Maintenance Contracts/Agreements**

- Aqua-Aerobic recommends periodic evaluation and maintenance for cloth media filters, blowers, pumps, decanter, diffusers, instrumentation and electric valves and actuators
- Required maintenance and lubrication may be included in the agreement
- Service technicians are available for inspections, maintenance and recommendations
